
Film and Discussion

The Mind of the Universe

Saturday, June 10, 2017 from 7:00 – 9:00 pm
Concord Hall, 1407 Chapala Street, Santa Barbara

The big shift in machine learning (Artificial Intelligence) is towards something called 'deep learning'. Deep learning is introducing a particular notion that the computer learns to represent information and to do so at multiple levels of abstraction. Since there will be robots in our daily lives, the challenge is to figure out a way to teach robots how to understand our intentions and emotions. Can we build robots that are intelligent and useful, but that also have empathy? Clips of films will be shown, including two that will elaborate on these themes and feature Pascale Fung and Joshua Bengio.

The *Mind of the Universe* is an international open source digital platform about the rapid evolution of our knowledge. It explores important questions and issues about human destiny and the future through the eyes of great minds from all over the globe.
